📍 Setup Aquitaine's OpenData in Osmose QA

- Check OSM vs OpenData
- Integrate

📍 Osmose QA on mobile

- Tags editor

The screenshot displays the Osmose QA web interface. At the top, there is a navigation bar with links for 'Change language', 'Errors by user', 'Relation analyser', 'openstreetmap.fr', 'Statistics', and 'Help'. Below this, a map shows various error markers (yellow, blue, red) overlaid on a satellite-style map. On the left side, there is a sidebar with a 'Severity' dropdown set to '1+2 only', a 'Fixable' dropdown, and a 'Topic' dropdown. Below these are filter options: 'Select: all nothing invert'. A list of error types is shown with checkboxes and colored indicators: 'Structure 20/21 all nothing', 'overlapping building', 'duplicated node', 'invalid polygon', 'reverse roundabout', 'boundary intersect', 'objects overlap', and 'orphan nodes'. On the right side, a 'Tags Editor' dialog box is open, displaying a list of tags for a specific node (node 2483753162). The tags include: '- bench=yes', '= shelter=yes', '= train=yes', '= public_transport=platform', '= railway=station', '~ name=Bellevue', '+ operator=SNCF', '+ uic_ref=8772686', and '+ source=SNCF - 06/2013'. The dialog box has 'Cancel' and 'Valid' buttons at the bottom.
